

Who is right?

How many mistakes?

Four teachers have completed some two-way tables. One of the teachers has made 4 errors, one has made no errors and two have made 1 error. Can you work out the number of errors made by each teacher?

The ICT teacher said

- The number of boys who study Textiles is larger than the number of boys who study Physics
- More boys study English Language than girls who study Art
- The number of boys who study Food is the same as the number of girls who study Biology
