1. This is a conversion graph between pounds and euros.

(a) Convert £36 into euros.

(a) € 43 [1]

$$€100 = £84 \quad €400 = 336$$

(b) (i) Convert €400 into pounds.

(i) £ 336 ..... [3]

(ii) State an assumption that you have made in working out your answer to part (i).

the conversion rate stays the same for large amounts [1]

(c) Explain how the graph shows that the number of euros is directly proportional to the number of pounds.

as the number of pounds increases the number of euros increases and £1 = €1.20 [2]

$$£10 = €12$$

$$£1 = €1.2$$

## CREDITS AND NOTES

| Question | Awarding Body |

### Notes:

These questions have been retyped from the original sample/specimen assessment materials and whilst every effort has been made to ensure there are no errors, any that do appear are mine and not the exam board s (similarly any errors I have corrected from the originals are also my corrections and not theirs!).

Please also note that the layout in terms of fonts, answer lines and space given to each question does not reflect the actual papers to save space.

These questions have been collated by me as the basis for a GCSE working party set up by the GLOW maths hub - if you want to get involved please get in touch. The objective is to provide support to fellow teachers and to give you a flavour of how different topics "could" be examined. They should not be used to form a decision as to which board to use. There is no guarantee that a topic will or won't appear in the "live" papers from a specific exam board or that examination of a topic will be as shown in these questions.
