

# DIY WORKSHEET

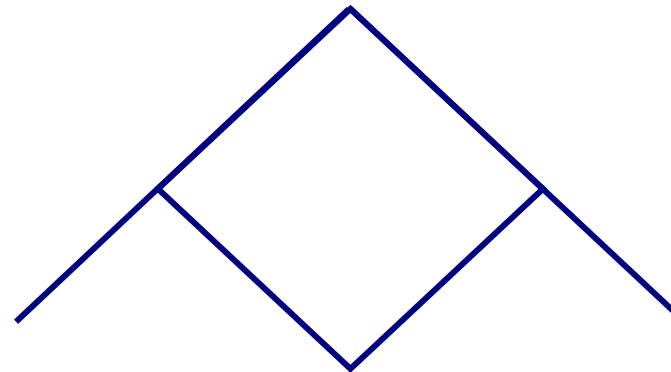

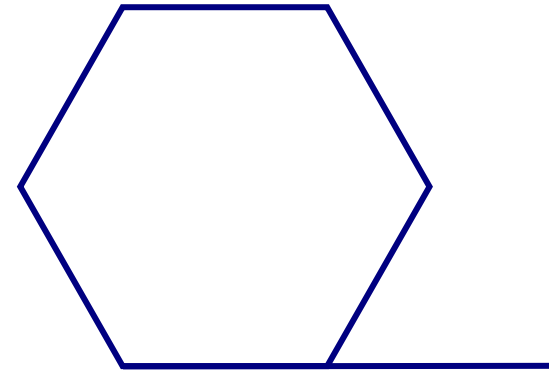

Your homework task is to design a worksheet for one of your classmates ...

You need to know:

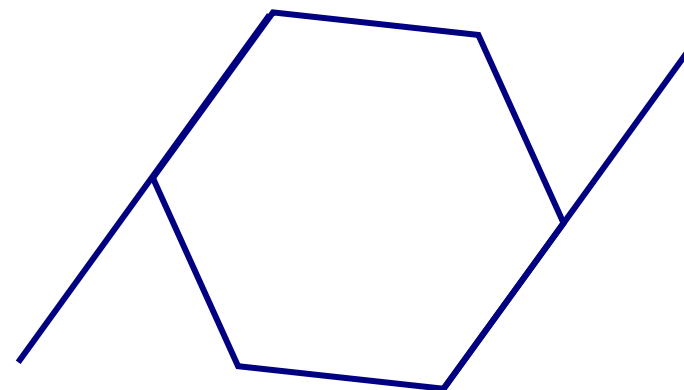

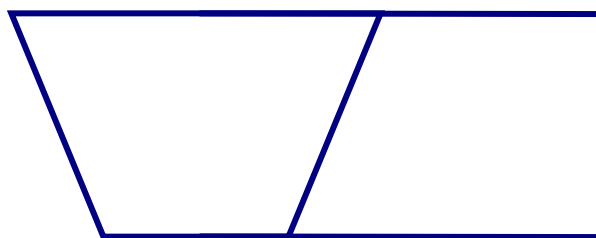

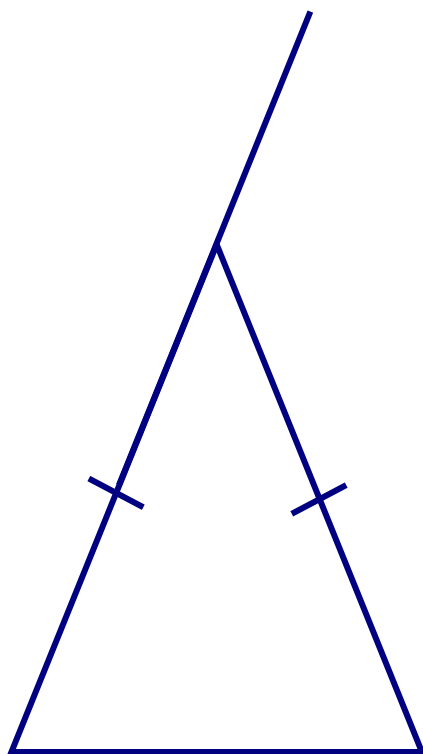

- The topic is **angles in polygons** (and you can use any of the "facts" we have covered in class and/or other angle facts).
- Your worksheet will be given as homework to another student next week and you will mark it when submitted, so you need to ensure that you have solutions (and it isn't an impossible question).
- You will need to include "actual" questions (at least 4 of them) - try to think about the language you would expect to see on an exam paper.
- Consider the difficulty of your question and also the layout/presentation as your work will be peer assessed.

*Good Luck*
