

# DIY WORKSHEET

Your homework task is to design a worksheet for one of your classmates ... You need to know:

- The topic is the **equations of motion with constant acceleration.**
- You must devise **three questions** using any of the 5 equations ... So it could be one equation per question or several equations ... Its up to you!
- Your worksheet will be given as homework to another student next week and you will mark it when submitted, so you need to ensure that you have solutions (and it isn't an impossible question).
- Consider the difficulty of your question and also the layout/presentation as your work will be peer assessed.

Good Luck
