

OOPS!

Below is a worked solution to a question that I feel you could have gained more marks on ..

The table below shows the approximate populations of five different places.

Place	Approximate Population
London	7 000 000
Sheffield	700 000
Harrogate	70 000
Ash Vale	7 000
Binbrook	700

(a) Which of the places has a population of about **seventy thousand**?

Harrogate (1)

(a) Use the table to complete these sentences:

The population of Harrogate is about **10 times** as big as the population of Ash Vale

The population of London is about **100 times** as big as the population of Harrogate.

The population of Sheffield is about **100** times as big as the population of Ash Vale

FACEPALM!! (2)

NOW HAVE A GO AT THIS:

The table below shows the approximate populations of five different places.

Place	Approximate Population
London	7 000 000
Sheffield	700 000
Harrogate	70 000
Ash Vale	7 000
Binbrook	700

(a) Which of the places has a population of about **seven hundred thousand**? _____ (1)

(a) Use the table to complete these sentences:

The population of **London** is about **10 times** as big as the population of _____

The population of _____ is about **100 times** as big as the population of **Binbrook**

The population of **Sheffield** is about _____ times as big as the population of **Binbrook**
