JustMaths

The length of a line is 11.8 cm to the nearest mm

What is the upper bound and lower bound ?

$$\frac{36c^2b^3}{9c^4b^6}$$

| Year group | 7 | 8 | 9 | 10 | 11 |
|---|---|---|---|---|---|
| Number of students | 190 | 145 | 145 | 140 | 130 |

Convert 12.5% to a fraction

A stratified sample of 60 students is to be taken. How many from each year group should be included?

Solve $5x - 5 = 3 - 3x$

I got 36 out of 80 on a recent test ... What was my percentage?

Write in standard form:

$3400 \times 10^4$

Prove that half the sum of four consecutive numbers is odd

Factorise $2x^2 + 5x + 3$

Expand

$(2x + 3)(2x^2 - 2)$
