4 Gary drove from London to Sheffield. It took him 3 hours at an average speed of 80 km/h.

Lyn drove from London to Sheffield. She took 5 hours.

Assuming that Lyn drove along the same roads as Gary and did not take a break,

speed = 240:5

(a) work out Lyn's average speed from London to Sheffield.

(b) If Lyn did **not** drive along the same roads as Gary, explain how this could affect your answer to part (a).

the distance could be longer, so if she still took Shows she would have to drue faster; or if shorter distance she would have druen slower

In a company, the ratio of the number of men to the number of women is 3:2

40% of the men are under the age of 25 10% of the women are under the age of 25

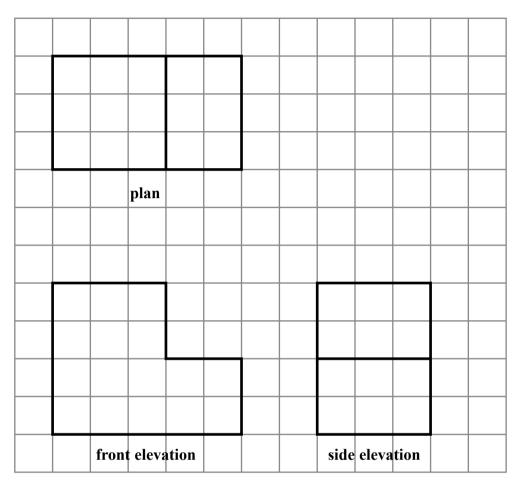

What percentage of all the people in the company are under the age of 25?

women

7 There are 1200 students at a school.

Kate is helping to organise a party.

She is going to order pizza.

Kate takes a sample of 60 of the students at the school.

She asks each student to tell her **one** type of pizza they want.

The table shows information about her results.

Pizza	Number of students
ham	20
salami	15
vegetarian	8
margarita	17

L()

Work out how much ham pizza Kate should order.

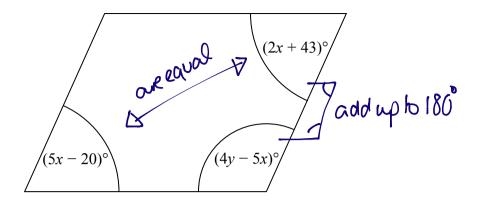

Write down any assumption you make and explain how this could affect your answer.

$$\frac{1}{3}$$

Here is a parallelogram.

Work out the value of x and the value of y.

$$5x - 20 = 2x + 43 + 20$$

 $+20 + 20$
 $5x = 2x + 63$
 $-2x - 2x$
 $3x = 63$
 $x = 21^{\circ}$

Using the fact that
$$3x + 4y + 5x = 180$$

 $3x + 43 + 4y - 5x = 180$
 $42 + 43 + 4y - 105 = 180$
 $4y - 20 = 180$
 $4y = 200$
 $4y = 50^{\circ}$ (To

$$x = 20$$

$$y = 50$$
