

Number Problems (F)

A collection of 9-1 Maths GCSE Sample and Specimen questions from AQA, OCR, Pearson-Edexcel and WJEC Eduqas.

Name:	me@justmaths.co.uk
Total Marks:	

1. Write numbers in the boxes below to make the statement true.

$$15 \times 20 = 5 \times \boxed{60} = 6 \times \boxed{50}$$

$\begin{array}{r} 15 \times 20 \\ 5 \times 3 \times 20 \\ 5 \times 60 \end{array}$
 $\begin{array}{r} 5 \times 60 \\ 5 \times 6 \times 10 = 6 \times 5 \times 10 \end{array}$

[2]

2. Angus thinks of a number.

If he cubes his number and then adds 9, he gets 17.

What number is he thinking of?

$$x^3 + 9 = 17$$

$$\begin{array}{r} -9 \quad -9 \\ x^3 = 8 \end{array}$$

$$x = \sqrt[3]{8}$$

$$x = \underline{2}$$

[2]

3. Leo is using these numbers to make a new number.

11 1 3 6

- He can use brackets, +, -, × and ÷ as often as he wishes.
- He cannot use any number more than once.
- He cannot use powers.
- He cannot put numbers together, e.g. he can't use 136.

What is the biggest number he can make?

Show how he can make this number.

$$(3+1) \times 6 \times 11 = 264$$

[4]

4. Peter says

- The sum of an odd number and an even number is even.
- The example $3 + 4 = 7$ shows that Peter is not correct.

Write an example to show that each of these statements is not correct.

(a) The sum of two prime numbers is always odd.

$$2, 3, 5, 7, 11, 13$$

$$3 + 5 = 8$$

[1]

(b) Squaring a whole number always results in an even number.

$$1^2 = 1$$

[1]

5. The product of three numbers is 312.

Two of the numbers are 3 and 13.

What is the third number?

$$3 \times 13 \times ? = 312$$

$$312 \div 39 = 8$$

8

..... [3]

6. Here are some numbers.

9.6 12.6 15.4 7.6 12.4 17.4

Write the numbers in pairs so that the sum of the numbers in each pair is the same.

25

9.6 and 15.4
12.6 and 12.4
7.6 and 17.4
and

[2]

7. Tanya needs to buy chocolate bars for all the children in Year 7

Each of the 130 children get one chocolate bar.

There are 8 chocolate bars in each packet.

Work out the least number of packets of chocolate bars that Tanya needs to buy.

$$130 \div 8 = 16.25$$

∴ 17 packets

[3]

8. There are 6760 people are at a rugby match.

3879 of the people are men.

1241 of the people are women.

$\frac{1}{4}$ of the children are girls.

Work out how many boys are at the rugby match.

$$6760 - (1241 + 3879) = 1640$$

$$\frac{1}{4} \text{ of } 1640 = 410 \text{ girls}$$

$$410 \times 3 =$$

$$1230$$

[3]

9. Three whole numbers have a total of 100

The first number is a multiple of 15

The second number is ten times the third number

Work out the three numbers.

$$15 \quad 30 \quad 45 \quad 50 \quad 60 \quad 75 \quad 90$$

$$55 \quad 50 \quad 40 \quad 25 \quad 10$$

$$x + 10x + \text{---} = 100$$

$$11x + 45 = 100$$

$$11x = 55 \quad x = 5$$

$$45, 5, 50$$

[3]

10. Tomas ran a Lucky Dip stall.

$$\begin{array}{l} 5 \\ 15 \\ \vdots \\ 95 \end{array} = 10$$

$$\begin{array}{l} 5 \\ 45 \\ \vdots \\ 75 \end{array} = 5$$

$$95 \times 7 = 665$$

$$75 \times 15 = 1125$$

$$1125 - 665 = 460$$

$$\begin{array}{l} 100 \\ 200 \\ \vdots \\ 700 \end{array} = 7 \times 12 = 84$$

There were 750 tickets, numbered 1 to 750

Tomas sold all the winning tickets, and some of the losing tickets.

He made a profit of £163

How many losing tickets did he sell?

$$163 + 112.50 + 84 = 359.50$$

$$= 719 \text{ tickets in total}$$

$$\text{LOSING TICKETS} = 719 - (75 + 7) = 637$$

[6]

11. Becky has some marbles.

Chris has two times as many marbles as Becky.

Dan has seven more marbles than Chris.

They have a total of 57 marbles.

$$57 \div 3 = 19 \text{ each.}$$

Dan says:

"If I give some marbles to Becky, each of us will have the same number of marbles."

Is Dan correct?

You must show how you get your answer.

No, Chris would have to give her 1 marble so they all have 19 each

B	C	D
x	$2x$	$2x + 7 = 57$
	$5x = 50$	
	$x = 10$	
10	20	27

[3]

12. The two numbers, A and B, are shown on a scale.

The difference between A and B is 48

Work out the value of A and the value of B.

A = -16

B = 32

[3]

13. I am thinking of a number (n).

I add 5 to my number.

$$n + 5$$

I divide the answer by 4

$$\frac{n + 5}{4} = 3.625$$

My final answer is 3.625

Work out my final answer if I add 4 to my number (n) and then divide by 5

$$3.625 \times 4 - 5 = 9.5$$

$$\frac{9.5 + 4}{5} = 2.7$$

[4]

Notes:

These questions have been retyped from the original sample/specimen assessment materials and whilst every effort has been made to ensure there are no errors, any that do appear are mine and not the exam board's (similarly any errors I have corrected from the originals are also my corrections and not theirs!).

Please also note that the layout in terms of fonts, answer lines and space given to each question does not reflect the actual papers to save space.

These questions have been collated by me as the basis for a GCSE working party set up by the GLOW maths hub - if you want to get involved please get in touch. The objective is to provide support to fellow teachers and to give you a flavour of how different topics "could" be examined. They should not be used to form a decision as to which board to use. There is no guarantee that a topic will or won't appear in the "live" papers from a specific exam board or that examination of a topic will be as shown in these questions.
